

AURA QUALITY SAAS PLATFORM

Complete Institutional Academic Quality & Compliance Management Manual

Manual Overview & Metadata

Platform Name: AURA Institutional Quality Management SaaS

Target Roles: Quality Managers, Deans, Lecturers, and Students

Supported Workflows: Automated Surveys, Risk Logs, KPIs & AI Insight Auditing

Integration Stack: Google Workspace, Google GenAI (Gemini SDK), Firestore & Auth

Document Purpose: Complete user guide & environment setup instructions

1. SYSTEM ARCHITECTURE & ISOLATION

AURA operates as a highly secure, tenant-isolated multi-institution platform designed to satisfy regional educational accreditation bodies. Every university is provisioned a logically isolated database space ensuring full structural security and information hygiene.

Core Functional Units Available on AURA:

1. Dashboard & Core Analytics: Dynamic visual trackers monitoring performance logs and active surveys.
2. Academics & Department Directory: Manage and search courses, lecturers, and college divisions.
3. Quality Review & Self-Studies: Design, review, approve, and finalize comprehensive self-study logs.
4. Operations Risk Registry: Continuous audit log of administrative and academic risk events.
5. Site-Visit & Field Audits: External review tracker to align with national accreditation standards.
6. KPI Tracking Hub: Real-time data logging for critical quality indexes (student-to-staff, retention, etc.).

2. TEMPORARY EVALUATION CAMPAIGNS

To resolve administrative overheads, AURA supports "Temporary Evaluation Campaigns". Quality Officers to generate custom questionnaires, assign them to courses, and monitor responses.

Workflow Steps:

- **Design Phase:** Define target course, selected instructors, and add courses.
- **Approval Flow:** Campaigns start as "Draft", transition to "Under Review", and then marked "Active" to receive student responses.
- **Dynamic Student Gateway:** Students access evaluations via a 100% secure 8-digit access code (e.g. EVAL-793X) or dynamic links.
- **Adaptive QR Codes:** Integrated QR codes dynamically update relative to course changes, safeguarding developers against 404 broken routes.

3. ENVIRONMENT VARIABLES CONFIGURATION

AURA utilizes secure, server-side environment variables to hide private credentials from the browser. These environment settings must be placed in the root directory under ``.env`` or injected via the AI Studio Secrets panel.

Required Environment Keys Explained:

1. GEMINI_API_KEY (Server Secret)

- Function: Powers the smart AI Recommendation and Compliance Audits engine.
- Where to place: In the root ``.env`` or AI Studio Secrets.
- Format: `GEMINI_API_KEY="AlzaSy..."` (Do NOT prefix with `VITE_`).

2. APP_URL (SaaS Router Utility)

- Function: Automatically routes dynamic QR codes and evaluation gateways to the current site origin.
- Format: `APP_URL="https://your-platform-domain.run.app"`

3. Yemen Mobile Wallet Merchant Settings (Financial SaaS Gateway)

- Function: Coordinates premium subscription payments via regional wallets.
- `JAWALI_WALLET_NUMBER`: Merchant phone number for Jawali (e.g. 770001234).
- `JAWALI_MERCHANT_ID`: Unique Jawali integration token (e.g. MERCH-JAW-9988).
- `JEEB_WALLET_NUMBER`: Merchant phone number for Jeeb (e.g. 780005678).
- `JEEB_MERCHANT_ID`: Unique Jeeb integration token (e.g. MERCH-JEE-5544).

4. STEP-BY-STEP PLATFORM USER GUIDE

Follow this operational outline to maximize the potential of the AURA platform:

Step 1: Accessing the Portal

Open the main domain. Input authorized credentials (default credentials can be used or customized via the user administration view). Select your institutional workspace (e.g., Oxford Global College).

Step 2: Designing an Evaluation Form Campaign

Navigate to the "Evaluation Forms & Campaigns" tab in the left sidebar. Fill in the campaign parameters (target lecturers, rating scales like Likert/Stars, and lock mechanisms). Set an active window schedule, and transition the status to "Active" to publish it.

Step 3: Simulating and Receiving Student Submissions

Instructors can display the generated QR code or copy the Short Link on the projector. Students input the code in the Gateway sub-tab or load the link on their mobile devices to submit anonymous evaluations.

Step 4: AI Audits & Compliance Reviews

Visit the "AI Compliance Advisor" or "Quality Evaluations" section. The platform feeds raw, isolated metrics to the integrated Gemini model to automatically draft regional corrective actions, program self-studies, and accreditation readiness scores without exporting sensitive student records.
